CRANSOCAAU
CAD Design Training Institute

COURSE BROCHURE

Build Your Design Skills. Explore Your Engineering Potential.

Discover CAD training programmes designed to help you develop computer-aided design skills and understand engineering design workflows through structured learning and practical exercises.

Our CAD Software Courses

PRACTICAL TRAINING | REAL SKILLS | BRIGHTER FUTURES

CREO Parametric

- 3D part modelling
- Assembly design
- Surface modelling
- Sheet metal design
- Engineering drawings

SOLIDWORKS

- 3D part modelling
- Assembly design
- Engineering drawings
- Design visualisation
- Introduction to simulation tools

CATIA

- 3D product design
- Surface modelling
- Assembly design
- Technical drawings
- Engineering design workflows

AutoCAD

- 2D drafting
- Drawing creation and editing
- Dimensioning and annotations
- Technical detailing
- Introduction to 3D modelling

Siemens NX CAD

- 3D modelling fundamentals
- Part and assembly design
- Engineering drawing creation
- Product design workflows

What You Can Learn

- Navigate CAD software interfaces and essential tools.
- Understand 2D and 3D design concepts.
- Practise part modelling, assemblies and technical drawing (where applicable).
- Explore engineering design workflows.
- Build sample design projects to practise your skills.

Who Can Enquire?

- Engineering students
- Diploma students
- Recent graduates
- Working professionals looking to develop CAD skills
- Beginners interested in learning computer-aided design

Previous CAD experience may not be required for beginner-level training. Confirm the entry requirements for your chosen course.
